

NSTA Regional Conference, Baltimore – Polar-ICE session

8:00 – 9:00am, Holiday 4
Saturday, October 7, 2017

Polar-ICE is providing opportunities to expand teaching and learning innovations in middle and high school classrooms as well as enhance science communication. Funded by the National Science Foundation, Polar-ICE is connecting Polar scientists with educators and students through the use of data generated through cutting edge polar science research.

The objective of the Polar-ICE project is to engage students in understanding how Polar Regions influence our lives while improving their understanding of how scientists work and understand a changing climate system.

Presenters:

Nicole Trenholm, Ocean Research Project
Liesl Hotaling, Eidos Education
Kathy Couchon, Narragansett High School

Additional activities for your classroom:

Lesson 1: Ocean Convergence: Let's Get Together

(<http://coseenow.net/converge/classroom-program/in-class-lessons/#oceanconv>)

Lesson 2: Penguins Foraging: Where and Why?

(<http://coseenow.net/converge/classroom-program/in-class-lessons/#penforaging>)

Lesson 3: Ocean Robots & Data: What? How? Why? (<http://coseenow.net/converge/classroom-program/in-class-lessons/#oceanrobot>)

Lesson 4: Investigating Why Penguins Forage There: Piloting Gliders

(<http://coseenow.net/converge/classroom-program/in-class-lessons/#pilotglider>)

Additional resources for your classroom:

Polar-ICE Data Story: What drives patterns in ocean change?

(<http://polar-ice.org/focus-areas/polar-data-stories/what-drives-patterns-in-ocean-change/>)

The ocean varies immensely over space and time. But how can we understand what drives the patterns in the differences of the ocean over space and time? How might the differences influence what kind of animals lives where?

Palmer Station Antarctica LTER: Learning from a time series

(http://pal.lternet.edu/sites/default/files/files/Palmer%20LTER%20Final%20Time%20Series%202013_0.pdf)

Expand your Perception of Data! Review techniques useful to scientists as they analyze series of data that represent consecutive measurements taken at equal space/time intervals.

Polar-ICE is made possible by the support of the National Science Foundation Grant# PLR-1525635.

NSTA Regional Conference, Baltimore – Polar-ICE session

Palmer Station Antarctica LTER: Now you Sea Ice, Now you Don't

(<http://pal.lternet.edu/sites/default/files/files/Now%20you%20Sea%20Ice%20Now%20you%20Don%27t%20Low%20RES%20version.pdf>)

Adapted from a lesson called: Climate Change from Pole to Pole, this lesson is intended for high school science students. The Western Antarctic Peninsula is a region experiencing rapid regional climate change. Students explore the topic using an interdisciplinary approach working cooperatively in groups investigating the biotic and abiotic components influencing the ecosystem dynamics. Students become specialists who gather evidence, graph data and have to formulate scientific explanations for their findings.

The Lost Seal of Antarctica

Created by teachers (Mary Ann Decker, Brenda Talbert), this lesson provides students with the opportunity to explore the differences in climate and ecosystems within Antarctica and between Antarctica and their local area. Students will locate and graph data to compare average temperatures, radiation and snowfall. Students will also demonstrate their knowledge of ecosystems of Antarctica by labeling a map. Lesson Plan (<https://www.mbari.org/wp-content/uploads/2016/01/lost-seal.docx>)

Association of Polar Early Career Scientists (APECS, www.apecs.is)

Polar Film Fest

In celebration of Polar Week 2016, the US Association of Polar Early Career Scientists (USAPECS) is announcing the [Polar Film Fest!](#) This is a virtual film festival – everything is online and you can watch the films whenever and wherever you want.

USAPECS assembled a set of short films (and some longer ones) for each of four themes. Each night, scientists with relevant expertise will watch the films and be available to answer questions on Twitter using [#PolarFilmFest](#). Please help us spread the word – and then enjoy some movies and join the conversation!

Project Polar Bear

Project Polar Bear is an international competition for middle and high school student groups taking action to fight climate change. Teams compete by creating a plan for a project that will help reduce reliance on fossil fuels and engage their communities. This can be a new project or a proposal to continue an existing project. Students and advisors track their progress during the competition through photos, research, and on social media. The top three high-scoring teams receive a grant of \$1000, \$750, and \$300, respectively. For more information visit: www.polarbearsinternational.org. Contact projectpolarbear@pbears.org for more information!
